## Excited-State Force Calculation Recipes

6/8/11

Goal: Low-cost, non-self consistent (perturbative) calculation of forces on excited adiabatic surfaces, which captures correct physics.

(Example: Photo-isomerization of CHz=NH)

(Example 2: Change-transfer (CT) excitation)

$$E(R)$$

force =  $-dE/dR$ 
 $S_0$ 

•	2
0	The Coulomb attraction between donor and acceptor requires
	1) Self-consistent change density / Kohn-Sham (KS) State calculation
· _ ·	W/ CT-excitation configuration.
	OR
	@ Many-body (Casida) approach w/ ground-State KS basis, which
	eliminates self-interaction (so that the newly occupied acceptor
	States energy East does not include the Hartree-potential
·	contribution from the evacuated  4/10(11) 2 in the donor)
	Finite-difference approach
	1. Obtain the I-th excited-state energy, E_I(IR), as a linear
0	combination of ground-state KS orbitals, using asymptotically
	correct (long-range exact exchange) exchange-correlation
	functional in Casidas equation.
	2. Then compute the force by finite difference,
	$E(R+\Delta)-E(R)$
	Need 3N excited-energy calculations, which is prohibitive
	for large systems.
0	

0 _	Non-self consistent (Harris-Foulkner) force calculation
	1. Obtain ground-state KS orbitals self-consistently.
	2. Solve Casida equation to obtain the I-th excited state,
	$ \Psi_{I} = \sum_{i,\alpha,\sigma} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \omega_{I} \end{array} \right\} \xrightarrow{\text{Fiao}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvector}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvector}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} - \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma} - \varepsilon_{i\sigma} \end{array} \right\} \xrightarrow{\text{Casida eigenvalue}} \left\{ \begin{array}{c} \varepsilon_{\alpha\sigma} - \varepsilon_{i\sigma} \\ \varepsilon_{\alpha\sigma} + \varepsilon_{i\sigma$
	Casida eigenvalue Slater determinant
	OK to equate this = 1 for
	large band-gap materials, if
	keeping orthogonality is
	beneficial [Walter & Häkkimen, New J. Phys. 10,043018 ('08)]
	·
	3. Compute the density perturbation
0	$\delta \rho(ir) = \rho[ir; \overline{\Psi}_{1}] - \rho[ir; \overline{\Phi}_{0}] \qquad (2)$
	which contains the crucial information (e.g. electron-
	hale polarization for a CT excitation state).
	4. Compute the excited-state force using the Harris-Foulkner
	perturbation approach [Torrolba et al., JCTC 5, 1499 ('09)].
	$\mathbb{F}_n = \mathbb{F}_n \frac{\text{Hellmann-Feynman}}{n} + \mathbb{F}_n \frac{\text{Non-self consistent}}{n} $ (3)
	force of n-th atom
	where
